CS 310 Project Description & Features

Group members: Hatice Melda Aktepe 18075, Burak Aytaç 16858, Cem Eşigök 20548, Deniz Mavi 20725.

Android Application for an E-Commerce website. (Mobile app for CS 308 Project)

Project Name: SU Shopping Mall (SUMall)

Similar products: Trendyol, Markafoni etc.

Our project will be based on our CS 308 Project (that is being developed by 3 of the group members and 2 other students). The project is about an E-Commerce site that sells apparel products.

The Android Application will be showing the products in a gallery, with a search function and an interface for the marketing manager to apply discounts on chosen products. The users will be able create their own accounts with their own username and passwords as well.

A point system where users gain points as they use the application and buy items. Points then can be used for buying items.

Payment options with multiple currencies.

FastBuy™ (patent not pending) An option that allows users to get "recommended" items that are chosen from a pool that are bought together by other users.

Allow people to purchase a randomly selected full set of outfit.

The project will be using a local copy of the database of the 308 project.
